=== CATATAN ===	
Akurasi Model	Tidak tersedia — dataset training bersifat unlabeled (tanpa kolom IS_FRAUD), sehingga metrik Precision, Recall, dan F1-Score tidak dapat dihitung.
Metode Evaluasi	Berbasis threshold boundary dari hasil training (Isolation Forest), bukan validasi terhadap ground truth.
Anomaly Rate vs Fraud Rate	Perbandingan ini bersifat indikatif — anomaly rate adalah parameter model (contamination), sedangkan fraud rate adalah hasil keputusan final (rule engine + pattern + ML + review analisis).
